

RapidRoll Outdoor Portable Barrier System

RAPIDROLL

by Ideal Warehouse
Innovations

Carry Unit: \$1063^{+hst} / Mobile Unit: \$1185^{+hst}

Portability

- 50' safety orange fencing, 4 posts, and 4 rubber base pads
- Weighs 28 lbs, allowing for easy transportation
- Connect multiple units while maintaining the fast, simple portability and set up
- Designed for ease of use and efficiency, handles double as links when in use

Efficiency

- Set up can be done in minutes by just one worker
- To take down, simply crank the handle and the barrier fencing retracts

Reusability

- Protected by a cartridge, preventing damage during transportation
- Molded with tough MDPE to withstand extreme weather conditions
- Greener alternative as it can be used multiple times

Safety

- Visual barriers that are both sturdy and portable
- Reflective tape for low light environments

Prices stated as of May 1st, 2019. Subject to change. FOB nearest Equipment World location. Taxes extra.

The Details

Safety First

Reflective safety tape is fitted on both sides of the cartridge.

Built To Last

Rapid Roll units are molded with MDPE to ensure they will withstand rough handling and extreme weather conditions.

Easy Extraction

One person can pull the material out of the Rapid Roll with ease.

Easy Retraction

Simply crank the handle in a clockwise manner and watch as the barrier fencing neatly rolls back into the Rapid Roll cartridge. There may be times when you will find it easier to wind up the roll by removing the cartridge from the base, resting the foot end on the ground and then winding in a semi horizontal position.

Rapid Roll Handle

Handle is constructed with heavy-duty HDPE and features a rotating head for easy rolling.

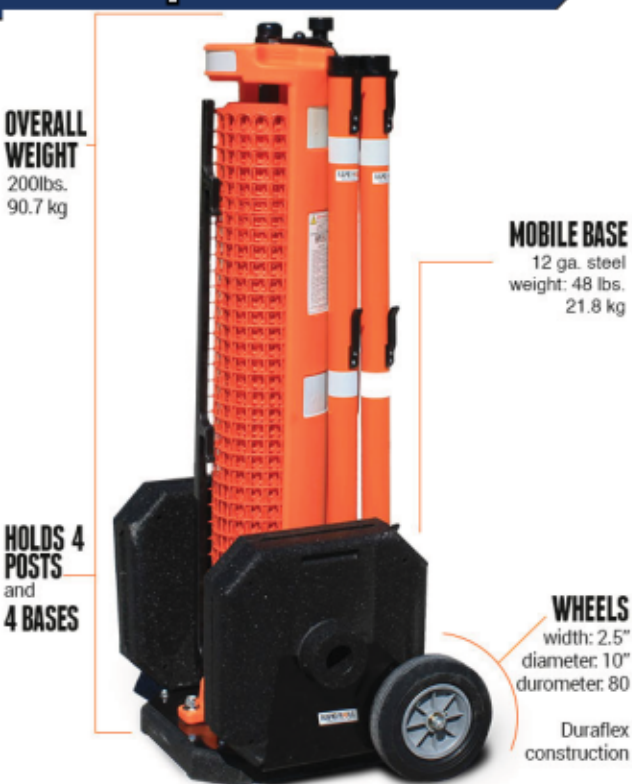

Rapid Link

The handles on the side of the unit serve a dual purpose. Firstly, they can be used to carry RapidRoll and also for mounting on the optional base. Secondly, the handles serve as receptors to link-up the lead end of the barrier fencing. RapidRoll allows you to connect multiple units while maintaining its fast and simple approach to the set up and take-down process.

Quick Connect

The internal shaft is fitted with (3) wrap around clips that are used to connect the end of the fencing to the crank shaft. To connect, simply hook the end of the fencing into the clip and start to roll. To remove, simply unwind the roll and unclip from the cranking shaft.
